-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 4 and 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saint-Lot (4028624) in view of Hefele (2251708).

Regarding Claims 1,4 and 7-10, Saint-Lot shows two antenna elements A1 and A2 separated less than a $\frac{1}{2}$ wavelength "D" and fed with a plurality of transmission lines connected from the antenna to the receiver 3, synthesizing means 5,6 for synthesizing the received signals and switching means 4,7 connected as recited and with a control means 16 all arranged as recited. A delay circuit is shown in terms of a phase shifter 5. However, Hefele is cited as resolving the level of ordinary skill in the art and shows a specific time delay network 58 (Figures 10 and 12) for delaying the phase between elements in the transmission lines. A third antenna is shown by Hefele in Figures 25 and 26 as 101 and connected to switching means 98,103 and synthesizing means 94-97 connected to the transmission lines feeding the antennas. It would have been obvious to employ the delay network and additional antenna arrangement of Hefele in the Saint-Lot antenna system for receiving the phase-shifted and steered antenna beam signals.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wimer whose telephone number is (571) 272-1833. The examiner can normally be reached on M-F.
